

Pacgate-ai Progress Memo — Since the OCR and Sanitizer Agent Stagings

Period covered: 2026-09-19 → 2026-10-06 (OCR agent staged 2026-09-19; sanitizer agent staged 2026-09-19)
 Release at close of period: v0.1.23, all runtime images in `ghcr.io/jzkk720/*`, public, anonymously pullable.
 Commits in period: 242. Chinese version: `PACGATE-AI-PROGRESS-MEMO-ZH.md`

1. Executive summary

Since the OCR extractor agent and the sanitizer agent were first provisioned on 2026-09-19, the project moved from "two staged agents inside a 0.1.17 stack" to a hardened, dual-workspace, multi-user v0.1.23 deployment with unified matter storage, verified end-to-end test lanes, and a complete client handover package. The work fell into four arcs: sanitizer/OCR reliability, security hardening, sandbox and auth integration for the collaboration lane (qm), and release + documentation.

2. Timetable

Date	Milestone	What happened	Evidence (commit)
09-19	Staging point	sanitizer-agent and ocr-agent provisioned to deer-flow (agent cards, auth, CSRF, PS 5.1 fixes)	ac94bc0 ... 9ddf3e3
09-18	ocr-service	PaddleOCR wrapper container with span output added	1415f75
09-20	0.1.17 release	version pins bumped; large-scan body caps; LAN CORS fix so browser sign-in works	2a51fbd , 264a9d1 , a0198d5
09-21	Multi-user design	multi-user scope docs, assigned-user design, qm bring-up audit	7467e2c , 5d6b109 , 38ba418
09-21	Auth hardening	deer-flow self-registration gated by config; setup token on /initialize ; model tags reconciled with pre-pull list	d7a0d82 , 41a76ac , e180fc8
09-22	Workflow library fix	compose now serves the firm's 222-workflow library instead of 10 built-ins; defect recorded with evidence	b7fc540 , 039afdc , 88455dc
09-22	Uploads security	refuse deletion through a symlink planted in uploads	48f5a3b
09-23	Clean-clone proof	runbook + judgement pass; memory adapter decision settled; legal-journey acceptance test (design item B)	01c9b39 , 864f0b8 , 151d05b

Date	Milestone	What happened	Evidence (commit)
09-24	Extraction correctness	fail-closed OCR empty pages; cache keyed on completeness; empty-extraction gate in the suite	9938df9 , 19b00ee , 487f20a
09-25	Text-native lane	direct reader for text-native documents incl. metadata; 4 DOCX text carriers read; formats .xlsx/.pptx/.html accepted; text never auto-escalated to a cloud model	9179bbe , 1cc6762 , ddcfa02 , 8182c58
09-25	0.1.18 release	version pins; workflow tier roster becomes runtime config	932ac8b , 17bc59b
09-26	Sanitizer step-1 detectors	ASCII boundary predicate, CJK-adjacent identifiers, landline + IPv4 detectors, grouped/full-width forms, windowed long-document NER, per-tier recall rows	f744ac7 ...
09-26	Release engineering	read-only mirror namespace defect fixed; tag-push pre-flight gate	a74dec3
09-27	0.1.19 release - NER by default	read-only mirror namespace defect fixed; tag-push pre-flight gate	294d597 , 06b1817
09-27	0.1.19 release - NER by default	NER weights baked into image, enabled via compose, gated at CI; memory cap 4 GiB; admission semaphore for sanitize jobs; If-Match revision on matter memory; memory scope enforced end to end; text lane never bypasses sanitization	692bff8 , 03af009 , 745685f , e0882b9 , 4043267 , 74191af , a564a9a , f364741
09-27	Gate suite	Python adapter suite wired; PDF-vs-source police gate; release bumper version loop closed	0401b8a , fc441c9 , df6b025
09-28	Installer bootstrap	tenant + admin bootstrapped on install; clean-clone proof defects fixed; harness auto-recovery	a8be956 , b3eccfe , 4848a94
09-28 → 09-29	Benchmark	full-stack benchmark + E2E smoke report for 0.1.20	32cf190
09-29 → 10-01	OpenViking + journey	qm and OpenViking lanes verified instead of skipped; 401 retry registered as gate	eaf4e0e , 161fd85
10-01	0.1.21 release	pins bumped; JWT 24h-expiry survival; PaddleOCR weights persisted	eaf4e0e , b08bd0b

Date	Milestone	What happened	Evidence (commit)
10-01	Audit E2E 0.1.21	full-audit recorded, three open items; lane-by-lane smoke gate added	45e2364 , ae2612c
10-02	Security correction	open-registration finding re-rated: route leaks MATTER DATA, not just config	743dcdd , 7c812f6
10-03	Registration closed	registration made FIRST-USER-ONLY so installs still bootstrap; admin provisioning route added with role-boundary tests; release 0.1.22; sanitizer E2E test fixes	483ab19 , ebac082 , 76311fe , 95a6418 , 4da1e7e
10-03	Runtime bring-up	Runtime 3 bring-up recorded; qm/gate-suite conflict retracted as false positive; qm image claim corrected to PUBLIC	d223a79 , e503200 , 041570c
10-03	Defect recording	incomplete-extraction 500 recorded as known; two stale status headers corrected; pinned qm sandbox image unobtainable defect recorded	3d3b9cc , a6a08f7 , 3e7e8e5
10-04	Sandbox root cause	qm sandbox defect root cause corrected twice (registry, not digest); incident recorded with secret set printed; fix design corrected after measurement; sandbox image published and repinned	2e81969 , f6d3e5b , 040d56e , 46e31d7 , ad36896
10-04	Dev-box audit	what is safe to clear before destructive steps; code/automation/workflow library confirmed NOT machine-local; 222-workflow figure established exactly	f86ea64 , c5d4965 , d4ca3dd , 4397005
10-04	Tooling lanes	plan 024 executed + post-re-sync re-audit; the four tooling lanes (markdown/officecli/OCR/sanitizer) verified live, text-native 59/59	9699285 , 4441569
10-05	Sandbox wiring	static docker CLI + socket into qm core; plan 025 with first-ever sandbox boot + live bridge E2E; CRLF-free launchers + bridge auto-provision; sandbox image rebuilt+published	90ba1cb , 222d381 , 1a720cc
10-05	Unified workspace	matter-workspace rollup endpoint + present-file matter mirror; v0.1.23 released and repin committed; literal 'None' matter_id guard	5fc63e1 , acf5a17 , d035103

Date	Milestone	What happened	Evidence (commit)
10-05	Handover docs	all user + operator handbooks refreshed for v0.1.23; handbook audit fixes; live browser verification of both login flows + Mailpit delivery	b3a1352 , 0ad7496
10-06	Installer gate fixes	PS 7-only operator removed; benchmark-exposed false-greens closed; sandbox auto-heal + install path staged; Join-Path fix	307a048 , 52c7da7 , ddfa54e , 83b1d2a

3. Where each lane stands

- OCR lane: ocr-service (PaddleOCR) is first-class; batch OCR with a 200-page run cap, per-version caching, fail-closed empty pages, and persisted model weights. Verified live 07/07.
- Sanitizer lane: step-0 + step-1 detectors shipped (CaseNumber/Landline/IPv4 + CJK adjacency + full-width digits), long-document windowing, admission control, egress gate on pending documents. Text-native suite 59/59, E2E 15/15 after two test-script fixes.
- Collaboration (qm) lane: sandbox launch wired and verified (image repin 52e867fc), local-sandbox patch over the loopback dead-path + env forwarding, magic-link login proven in a real browser, sandbox image public.
- Research (deer-flow) lane: 222 workflows/46 categories served, matter workspace rollup, present-file auto-file into the matter, 19 MCP tools, artifacts panel with per-type preview.
- Auth: deer-flow email+password; qm one-time emailed links with Mailpit (pilot) / Resend (production); registration first-user-only; admin route POST /api/auth/users.

4. Open items

- Incomplete-extraction 500 is recorded as a known defect, not yet fixed (**deploy/DEFECT-incomplete-extraction-500.md**) — deliberate, client-visible contract change deferred to its own release.
- Sanitizer rule configurability (roadmap, not a defect): Tier-1 rules are compiled into **pacgate-redact** (by design - deterministic-first), and no runtime rule-management API exists. Discovered 2026-10-06 when a deer-flow report claimed CN_ID/USCC were missing: investigation REFUTED that claim (both checksum rules exist in **rules.rs/checksum.rs**; the reported test value had an invalid check digit), but it surfaced the real roadmap gap - a client wanting tenant-specific rules has no channel. R1 is now CLOSED: the cross-jurisdiction extension set (**PASSPORT E+letter+7 / legacy E+8, HK_MO_PERMIT H|M+10, labelled TW_PERMIT 8+2, labelled LEGACY_ID 15-digit first-generation ID, lawyer license 17-digit via REG_NO**) shipped with recall fixtures; tests 151/151 green. Still open: a configurable rules channel (**rules.yaml** mounted at deploy + versions folded into the SHA-256 ledger) is a design-level vendor feature request, not a bug fix - it needs its own plan (mapping/version implications), and the placeholder-code set in persisted mappings must stay backward-compatible when entity codes are added.
- QM lifecycle on Windows: resolved 2026-10-06. The old "non-durable routing across core rebuilds" note was wrong for this fleet - **qm up/qm down** cannot run on Windows at all (the CLI's **which()** shells **/bin/sh** → **ENOENT**, measured), so the only operative path is **compose.qm.yaml**, which bind-mounts **pi-models.ts / local-sandbox.ts** / docker-CLI + socket and keeps the routing and sandbox lane durable across recreates. Handbooks (EN+ZH) updated 2026-10-06: **qm.cmd up** instructions replaced with the compose path.

- ~~The working tree at memo time still carried `setup-qm.ps1` and `local-sandbox.ts` functional edits awaiting commit~~ CLOSED 2026-10-06: committed **307a048** (sandbox auto-heal + install path: sandbox-local tracked, docker-CLI fetch+SHA-verify, wrapper build) with the clean-clone first-bootstrap proof; **52c7da7** closed the three false-green gates; **ddfa54e** fixed the PS 7-only ? . that broke `install.ps1` parsing under PS 5.1; **83b1d2a** fixed the Join-Path bug the clone proof caught.
